Preface ........................................................................................................................................... xxiii
Foreword by I. Howard Fine, MD ................................................................................................ xxv

Section I Preoperative Questions ................................................................................................. 1
Question 1 With Coexisting Macular Disease, How Can I Tell Whether It Is Worth Doing Cataract Surgery? ................................................................. 3
Douglas D. Koch, MD

Question 2 When Can Cataract Surgery Alone Be Performed in Patients With Fuchs’ Dystrophy? ................................................................. 7
Walter J. Stark, MD

Question 3 What Should I Do Differently for Glaucoma Patients? .............................. 11
Bradford J. Shingleton, MD

Question 4 Which Patients Need a Combined Glaucoma Procedure? ...................... 17
Thomas Samuelson, MD

Question 5 What Should I Do Differently in Patients at Higher Risk for Retinal Detachment? ................................................................. 23
Richard J. Mackool, MD

Question 6 With How Large a Zonular Dialysis Can Phaco Be Performed? .............. 27
Bonnie An Henderson, MD

Question 7 I Have a Cataract Patient With a Traumatic Iris Defect and Glare Symptoms. What Should I Do? ................................................................. 31
Francis W. Price, Jr, MD

Question 8 How Important Is It to Reduce or Eliminate Spherical Aberration and Is There an Advantage to Having Some Present? ................................................................. 37
Jack T. Holladay, MD, MSEE, FACS

Question 9 What Intraocular Lens Should I Use in the Postkeratorefractive Patient? ................................................................. 43
Warren E. Hill, MD, FACS
Question 10 How Do I Perform Cataract Surgery in Eyes With a Phakic Intraocular Lens? 49
Paul Koch, MD

Question 11 When Should I Use a Toric Intraocular Lens Versus Astigmatic Keratotomy Versus Laser Bioptics? 53
Kerry D. Solomon, MD

Question 12 My Astigmatic Keratotomy Results Are Unpredictable. How Can I Improve Them? 59
R. Bruce Wallace III, MD, FACS

Question 13 For How Long Should Topical Antibiotics and Nonsteroidal Anti-Inflammatory Drugs Be Used Before and After Cataract Surgery? 65
Francis S. Mah, MD

Section II Intraoperative Questions 69

Question 14 Under Topical Anesthesia, the Patient Is Uncooperative and Complaining of Pain. What Should I Do? 71
Kenneth J. Rosenthal, MD, FACS

Question 15 How Should I Proceed if I Made a Poor Clear Corneal Incision? 77
Randall J. Olson, MD

Question 16 What Should I Do if the Chamber Is So Shallow That It Does Not Deepen Much With Viscoelastic? 81
Johnny Gayton, MD

Question 17 My Capsulorrhexis Flap Tore Radially. How Should I Proceed? 85
Rosa Braga-Mele, MEd, MD, FRCSC

Question 18 Despite Attempting Hydrodissection, I Cannot Rotate the Nucleus. How Should I Proceed? 89
William J. Fishkind, MD, FACS

Question 19 Following Hydrodissection, the Iris Is Prolapsing and the Globe Is Very Firm. How Should I Proceed? 93
I. Howard Fine, MD

Question 20 How Do I Proceed if I See a Small Wound Burn With Whitening of Corneal Stroma? How Would I Close a Severe Corneal Burn? 97
Robert H. Osher, MD
Question 21 How Should I Manage a Small or Large Descemet's Membrane Detachment? ................................................................. 103
   Terry Kim, MD

Question 22 After Inserting the Phaco Tip, the Chamber Dramatically Deepens and the Patient Complains of Pain. How Should I Proceed? .................. 109
   Robert J. Cionni, MD

Question 23 What Should I Do Differently With a Posterior Polar Cataract? .......... 113
   Samuel F. Masket, MD

Question 24 What Should I Do Differently With a Hypermature White Cataract? ................................................................. 117
   Steve A. Arshinoff, MD, FRCSC

Question 25 What Is the Best Way to Manage Intraoperative Floppy Iris Syndrome? ........................................................................................................ 121
   David F. Chang, MD

Question 26 After Chopping or Cracking a 4+ Nucleus, a Leathery Posterior Plate Still Connects the Fragments Centrally. How Should I Proceed? .......... 127
   Roger F. Steinert, MD

Question 27 During Phaco, the Posterior Capsule Is Trampolining More Than Usual. How Should I Proceed? .............................................. 131
   Barry S. Seibel, MD

Question 28 What Are the Earliest Intraoperative Clues of Posterior Capsular Rupture? ................................................................................. 135
   Lisa B. Arbisser, MD

Question 29 The Capsular Bag Is Unexpectedly Mobile During Phaco. When Should I Implant a Capsular Tension Ring and Which Size Should I Use? .... 141
   Iqbal Ike K. Ahmed, MD, FRCSC

Question 30 What Should I Do When the Diameter of My Completed Capsulorrhexis Is Very Small? ................................................................. 147
   Howard V. Gimbel, MD, MPH, FRCSC, FACS

Question 31 When Should an Anterior Vitrectomy Be Performed Via the Pars Plana Versus the Limbus? .................................................................. 151
   Louis D. “Skip” Nichamin, MD

Question 32 When and How Do I Stain the Vitreous With Intracameral Kenalog? .............................................................................. 155
   Scott E. Burk, MD, PhD

Preface

The informal “curbside consult” is a commonplace occurrence in every field of medicine. This is where a busy clinician, when faced with a diagnostic or treatment dilemma, solicits practical advice from a knowledgeable expert. Every day, these brief consultations take place in clinic hallways, over the telephone, and by email. The question is brief and concise. The advice is practical, to the point, and based upon that expert’s knowledge, judgment, and experience.

This textbook on cataract techniques seeks to provide a compendium of this information—answers to the thorny questions most commonly posed to specialists by practicing colleagues. This educational question-and-answer format is unique among other publications. Just as a curbside consult is distinguished from a lecture or an instruction course, so is this compilation different from a scientific journal or standard textbook. Most of these clinical questions do not individually merit a lecture, review article, or book chapter. In most cases, these questions are not answered definitively by the scientific literature.

The questions were compiled by my associate editors and myself and then posed to 49 of the top cataract consultants in North America. We have divided the book into 3 sections: preoperative, intraoperative, and postoperative questions. The advice from our surgical consultants is based upon personal experience, their review of the evidence-based literature, and in some cases, their own clinical studies. I asked that our consultants’ answers meet my 4 criteria of content—the 4 “Cs.” The advice must be current (timely), concise (summarizing), credible (evidence based), and clinically relevant (practical).

As you read, imagine that you have tracked down and then posed your question to a leading authority by email, telephone, or in person. Whether you read the book from cover to cover, read 1 question at a time (whenever your schedule allows), or simply employ this as a handy reference for when difficult problems arise, I hope that you will find this novel educational format to be both stimulating and useful.

David F. Chang, MD
Foreword

We ophthalmologists are frequently confronted with patients who represent unusual challenges, and in preparation for those cases, we may consult the literature, surgical atlases, and textbooks. However, most commonly, we call friends, colleagues, associates, or recognized experts in the particular area of challenge. Certainly, the faculty at major meetings are always confronted following their session with ophthalmologists who come to ask questions about one of their patients who present a unique challenge.

In this book, David F. Chang, MD has brought together recognized experts in cataract surgery and has given each of them a specific problem to address. The book is appropriately organized into 3 sections: preoperative, intraoperative, and postoperative questions. Each of the questions focuses on a highly specific problem. The authors are all well known and highly recognized for their ability to manage that particular problem and each author describes exactly how he or she handles that situation. The questions are precisely focused and appropriate without being exhaustive or overburdened with caveats. This is a very easily readable and interesting book. The concise nature of each of the questions allows for continuous reading; however, it will probably find its greater utilization as a reference source as surgeons return to the book to deal with a specific problem when it arises.

Dr. Chang is an internationally recognized surgeon, teacher, researcher, author, and clinician. It was a brilliant insight to recognize that there is a need for the book, and we are fortunate that he has organized the topics and brought together the faculty to address that need within our resource material. This is a book that will be helpful to every surgeon, from the novice to the expert, and will find its place among the most commonly referred-to sources by anterior segment surgeons.
