The Jules Stein Eye Institute and American Society of Cataract and Refractive Surgery Joint Symposium will provide ophthalmologists the opportunity to learn from experts, share experiences, review relevant literature, and synthesize this information to improve the evaluation and management of patients with disorders of the anterior segment of the eye. Symposium emphasis will be on current and future cataract evaluation and treatment, refractive error evaluation and treatment, and related issues. In addition to formal lectures and discussion panels, there will be ample opportunity for discussion between faculty and attendees and opportunity to meet with representatives from industry.
